GOAL

I'm looking for my first job as Software Developer Jr.

EDUCATION

Bachelor's Degree on Computer Science

Instituto Federal de São Paulo

📅 Jan 2019 – Dec 2022 📍 São João da Boa Vista, São Paulo

Technical Course in Informatics

Limeira's Technical College

📅 Jan 2015 – Dec 2016 📍 Limeira, São Paulo

PROJECTS

OMNIMED Project

Instituto Federal de São Paulo

📅 2022

The OMNIMED project consists of a website that aims to serve population with a telemedicine system, and was developed by the students of the eighth semester of the Bachelor of Science in Computing. I worked as a backend developer and database administrator during the project, in addition to being the Scrum Master of my module during the first semester, where I gained experience with the agile methodology and a simulation of a real workplace, in addition to the technical knowledge in PHP, HTML5 and JQuery, using MVC with the CodeIgniter 4 framework. In my portfolio can be found the links to access the project information portal, in addition to the link to access the website developed.

REST API for beers

📅 2023

As part of the test for the Orma Carbon company, it was developed a REST API for the complete CRUD of beers to the hypothetical company X. The project used GOLang with Gin framework. Link can be found in my portfolio.

Apocalypse World TTRPG Bot

Commission

📅 2023

This project was done as a commission requested via Discord. The idea is a bot that can serve as a support for playing the TTRPG system "Apocalypse World". With it you can create your character sheet, adjust your status, the damage you receive (harms), your relationships to other characters (HX), your inventory and money, and you can trade items with other characters. It was done using Python and SQLite3, as well applying MVC concepts. The bot is now running in a Vultr ubuntu server, though the bot link is not accessible openly, the source code is on my portfolio.

STRENGTHS

Fast learner Creativity
Analytical thinking Organization
Adaptability Multitasking
Time management Efficiency
